Activated Carbon Adsorber

Ultratorp

AKC 0005 - 8750

MAIN FEATURES & BENEFITS

- Activated carbon adsorber for the removal of oil vapors and hydrocarbons, including built-in oil indicator
- High operating safety, since the exact residual oil content can be determined at any time
- Generous sizing of vessel diameter, low flow velocities, this leads to low abrasion of the activated carbon and to a low differential pressure

INDUSTRIES

- PCB assembly and CD manufacturing

- Paint and finish industry

- Machine building industry and plant engineering / construction

PRODUCT DESCRIPTION

Prefiltered, clean and dried compressed air (required inlet conditions) is led via the inlet (1) into the vessel and is lead through the gas diffuser to the adsorption vessel inlet (2) and through the activated carbon bed (3) from top to bottom.

In the activated carbon bed, the compressed air is cleaned from oil vapours and hydrocarbons.

The cleaned air is lead via the lower gas diffuser (4) and the outlet of the adsorption vessel (5) to the compressed air network and to the point of use.

By means of an oil indicator (6) at the outlet of the adsorber, the saturation of the carbon can be measured online, at any time.

Typical applications for the activated carbon adsorbers are:

- **Laser machines**

Treatment of cutting gas or purge gas

- **Breathing air**

Removal of oil and flavor substances

- **Point of use applications**

Production of oil free compressed air for various point of use applications
e.g. packaging machine

Main Components

- Unit inlet (1)
- Adsorption vessel inlet (2)

PRODUCT SPECIFICATIONS

Features:	Benefits:
Largely dimensioned amount of activated carbon:	High retention rates and long lifetime of activated carbon (residual oil content of $\leq 0,003 \text{ mg/m}^3$ and a lifetime of > 10000 operating hours)
Largely sized vessel diameters	Low flow speed, therefore no risk of abrasion of activated carbon and low differential pressure
Activated carbon adsorber with residual oil indicator standard	High operating safety, since residual oil content can be measured on-line at any time

Example:

$\dot{V}_{nom} = 200 \text{ m}^3/\text{h}$, inlet temperature = 30°C, operating pressure = 10 bar (g),

$$\dot{V}_{kor} = \frac{\dot{V}_{nom}}{f} = \frac{200 \text{ m}^3/\text{h}}{1,38 * 1,0} = 144,93 \text{ m}^3/\text{h}$$
